What is ITV?

- Enhanced TV
 - EPG
 - "Tell me more"
- Interactive TV
 - Games, polls
 - T-commerce, VOD
- Internet TV
 - E-mail, Chat, Surfing at 10 ft
 - Program/ad related links, walled gardens
- PVR (Personal Video Recording)
- Digital music
- Home networking

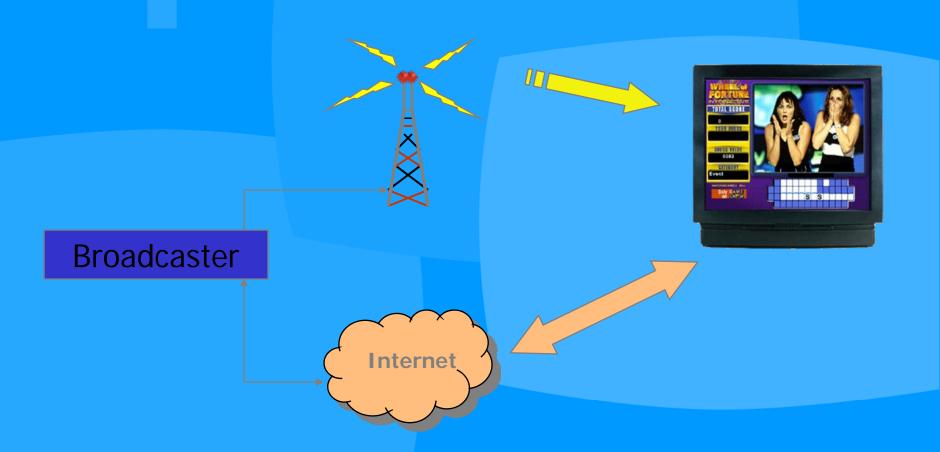

Enhanced TV

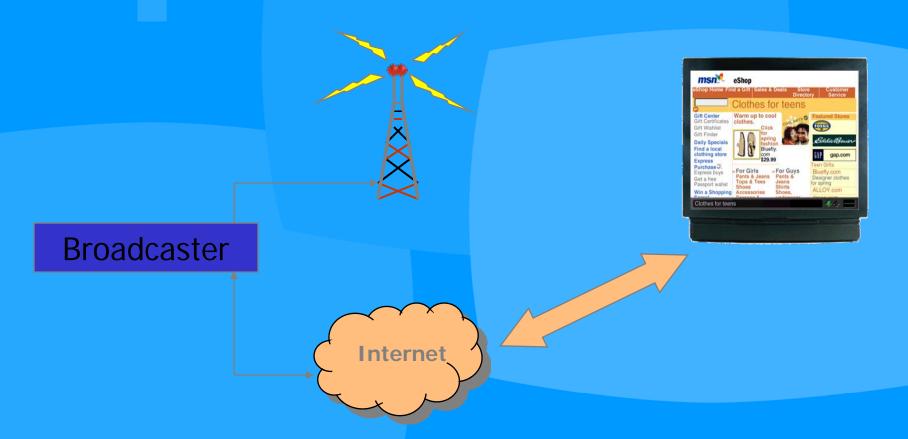

Interactive TV

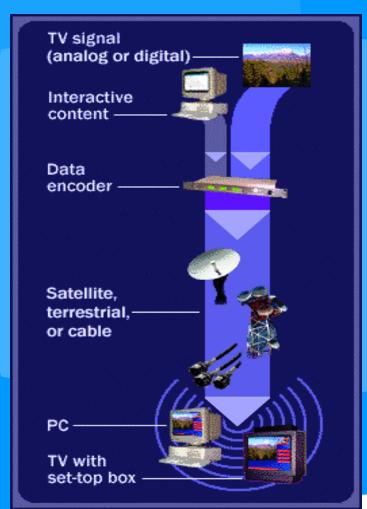

Internet TV

Downstream data path

- 10-14 kb/s perVBI line today
- Typically 2-3 lines used (~28.8 kb/s)
- DTV capacity willbe ~3 19 Mb/s

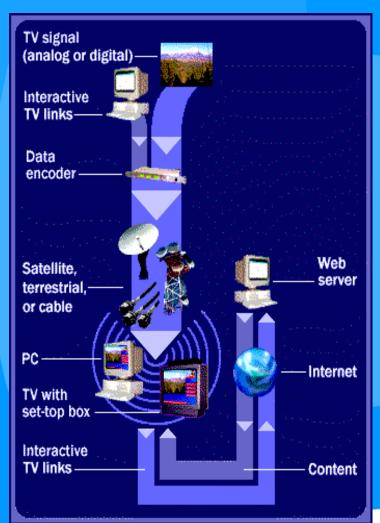

Upstream data path

Typically uses
 dial-up modem
 today (56 kb/s)

DSL or DOCSIScoming soon(>256 kb/s)

Law & Order 🗰

8:00 PM -- 9:00 PM TV-MA

Kincaid and McCoy are split over asking for the death penalty when a suspect is arrested in the murder of an undercover narcotics officer.

What is ITV today (NTSC)?

- ATVEF in VBI
- "Two screens" (ABC's Enhanced TV)
- Proprietary platforms
 - WebTV
 - OpenTV
 - Liberate
 - Others

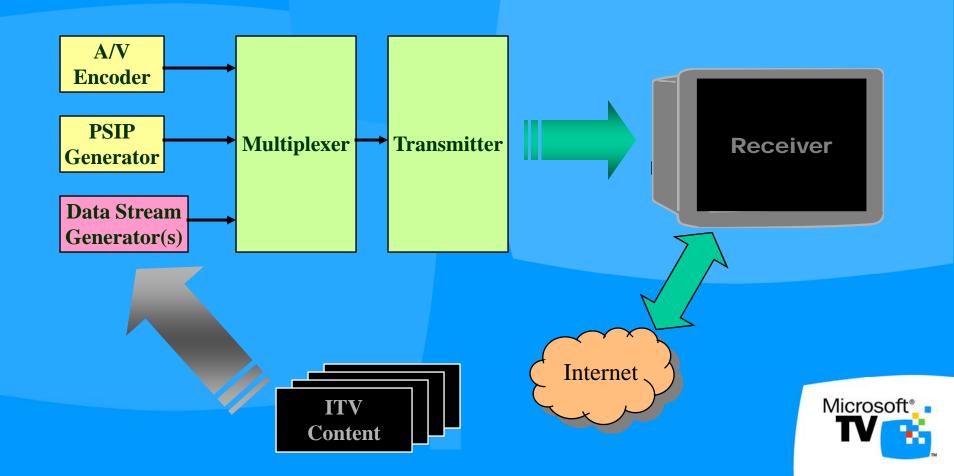

What is ITV tomorrow (DTV)?

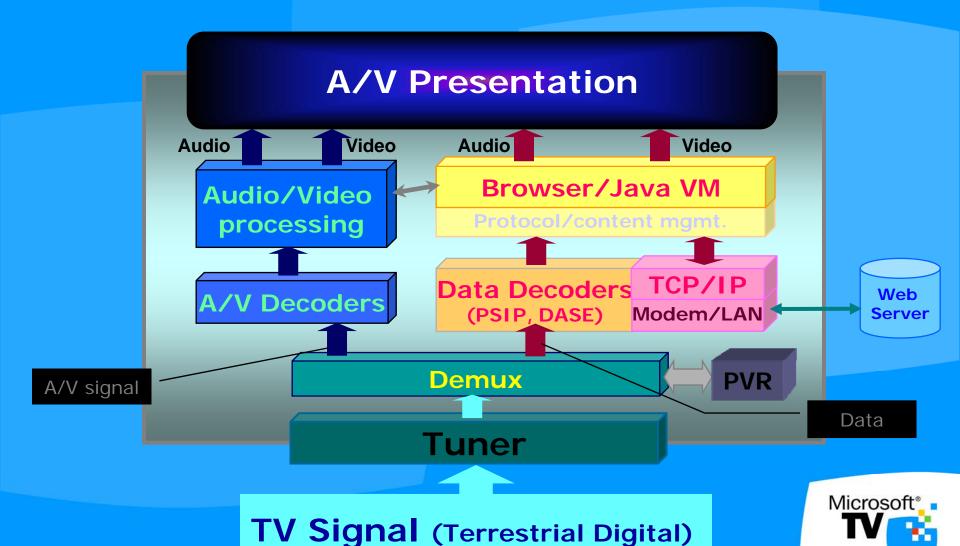

- ATSC DASE (DTV Application Software Environment, T3/S17)
- OCAP (OpenCable Application Platform -CableLabs)
- DVB MHP (Multimedia Home Platform)
- ARIB BML (Broadcast Markup Language)
- Declarative vs. Procedural content
- Interoperable PVRs (TV-Anytime Forum)

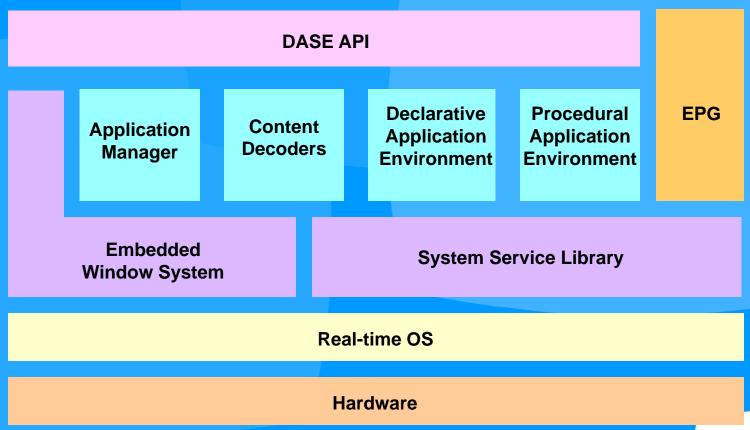

DTV Transmission

DTV Receiver

DASE client architecture

Creating content

- Absolutely essential to ITV success
- Common authoring standard needed
- Easy tools required
- Various bindings to delivery formats required
- Declarative content preferred today
- ATVEF is a good example

The ATVEF v 1.1 Specification

- Advanced Television Enhancement Forum (www.atvef.org), 1999
- Content specification for ITV
- Transport recommendations
- Recommendations for bindings
- Basis for SMPTE DDE-1

Fundamental principles

- Uses existing content standards
- "Create once, play everywhere" (COPE)
- Transport-independent
- Bridgeable across systems
- Universal display (TV, STB, PC, HHD, etc.)

ATVEF Transport

- How content is sent to user
 - Internet links & triggers only via TV (Transport A)
 - All content via TV (Transport B)
- Transport A assumes backchannel
- Transport B for one-way
- Both can run simultaneously

ATVEF Bindings

- Define how ATVEF content runs on various distribution services
- Each service uses unique binding for common content
- IP is reference binding
- NTSC-specific binding also in spec
 - Transport A uses VBI Line 21, T-2 (EIA-746A)
 - Transport B uses IETF's IP-over-VBI recommendation

SMPTE takes up ATVEF

- DDE-1 (Declarative Data Essence)
- Extending and clarifying ATVEF 1.1
- Will become ANSI spec
- Emission standard for declarative ITV content authoring

How it works with ATSC

- Transcoding to DASE Declarative Application Environment (XHTML browser)
- Transcoding likely done at emission point
- All DASE receivers will support DDE-1
- Triggers remain an open issue (\$13/DIWG)
- Disney/ABC, WB, PBS, others support declarative only now, procedural later
- DASE 1.0 Spec nearing completion

In the end...

- Ideally, content authors COPE
- Consumers buy any manufacturer's TV or STB, which offers uniform and/or predictable ITV functionality
- International differences will still exist
- Differences in ITV systems among US delivery formats (OTA, cable, DBS) still require convergence
- ITV means business for broadcasters!
